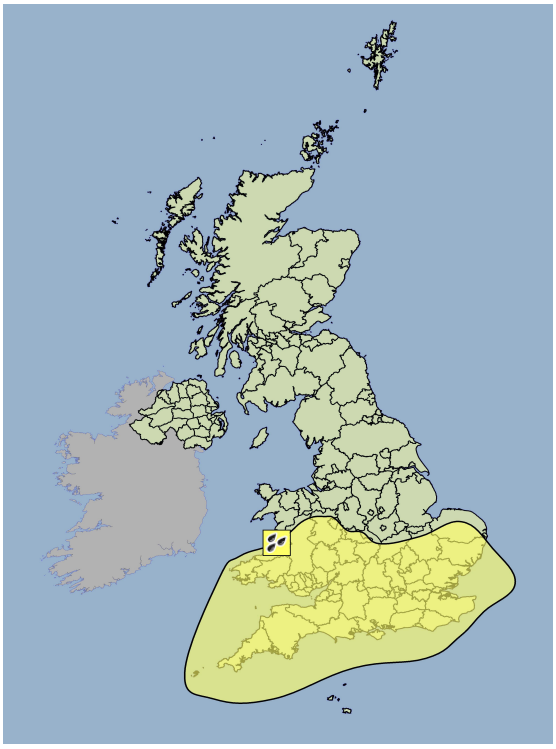
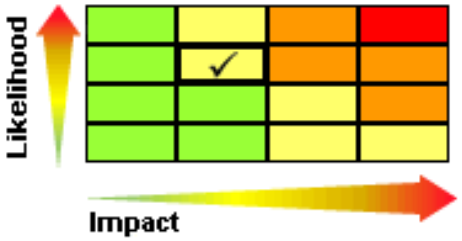
National Severe Weather Warning Service





Chief Forecasters Assessment
Friday's storm system is now moving into the North Sea and weakening. There will be some rain or showers, still perhaps heavy in a few areas through the rest of Saturday, as well as strong winds for a time yet. However, on the whole, we will see an improvement in weather conditions as the day goes on, with a much more pleasant day previewed for Sunday.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **11:00 on Sat, 15th Feb 2014** until **20:00 on Sat, 15th Feb 2014**

Although the worst of the rain has passed, further squally showers still have the potential to line up in bands across some southern areas of England and Wales through much of the rest of Saturday. Following Friday's heavy rainfall and given the saturated conditions, the public should be aware of the potential for further flooding in places, although impacts typically reducing and becoming more localised.

This is the final update to the Alert first issued on Monday, taking into account that we are now in a slowly improving phase, weatherwise at least. Impacts from Friday's and Saturday's rainfall may continue on some rivers on subsequent days and further information may be found by visiting the Environment Agency website or by calling the Environment Agency Floodline.
